SJR

The SJR is a size-independent prestige indicator that ranks journals by their "average prestige per article". It is based on the idea that "all citations are not created equal". SJR is a measure of scientific influence of journals that accounts for both the number of citations received by a journal and the importance or prestige of the journals where such citations come from. It measures the scientific influence of the average article in a journal, it expresses how central to the global

Total Cites

Self-Cites

Evolution of the total number of citations and journal's self-citations received by a journal's published documents during the three previous years. Journal Self-citation is defined as the number of citation from a journal citing article to articles published by the same journal.

1999 2001 2003 2005 2007 2009 2011 2013 2015

Cites

Year

Value

Citations per document

This indicator counts the number of citations received by documents from a journal and divides them by the total number of documents published in that journal. The chart shows the evolution of the average number of times documents published in a journal in the past two, three and four years have been cited in the current year. The two years line is equivalent to journal impact factor (Thomson Reuters) metric.

Cites per document	Year	Value
Cites / Doc. (4 years)	1999	0.209
Cites / Doc. (4 years)	2000	0.240
Cites / Doc. (4 years)	2001	0.272
Cites / Doc. (4 years)	2002	0.291
Cites / Doc. (4 years)	2003	0.439
Cites / Doc. (4 years)	2004	0.397
Cites / Doc. (4 years)	2005	0.445
Cites / Doc. (4 years)	2006	0.429
Cites / Doc. (4 years)	2007	0.396
Cites / Doc. (4 years)	2008	0.384
